

# Nikhil Pappu

## Basic Info

: [nikpappu@pdx.edu](mailto:nikpappu@pdx.edu)

: [nikhilpappu.info](http://nikhilpappu.info)

Fifth year computer science PhD student at Portland State University working on quantum cryptography.

## Institutions

2021- | **PhD in Computer Science**  
*Portland State University, USA*

2016-2021 | **Integrated M.Tech (B.Tech + M.Tech) in Computer Science and Engineering**  
*IIIT Bangalore, India*

## Experience

SUMMER 2025-	<b>Research Internship - Unclonable Puncturable Obfuscation</b> <i>Portland State University</i> Advisors: <a href="#">Fuyuki Kitagawa</a> , <a href="#">Ryo Nishimaki</a> Currently working on collusion-resistant constructions and compilers for unclonable puncture obfuscation and single-decryptor encryption. Also studying the notion of non-interactive zero-knowledge proofs with certified everlasting zero-knowledge guarantees.
WINTER 2025	<b>Research Assistant - Secure Key Leasing from Traitor Tracing</b> <i>Portland State University</i> Collaborators: <a href="#">Fuyuki Kitagawa</a> , <a href="#">Ryo Nishimaki</a> Worked on a traitor-tracing based approach to collusion-resistant secure key leasing (SKL). Constructed collusion-resistant SKL for PRFs from LWE, among other results.
SUMMER 2024	<b>Research Internship - Collusion-Resistant Secure Key Leasing</b> <i>NTT Research, Tokyo</i> Advisors: <a href="#">Fuyuki Kitagawa</a> , <a href="#">Ryo Nishimaki</a> Worked on unbounded collusion-resistant secure key leasing for public-key encryption, achieving it based on LWE among other results. Appears in the Crypto 2025 and TQC 2025 conferences.
WINTER 2024	<b>Research Assistant - Unclonable Cryptography</b> <i>Portland State University</i> Advisor <a href="#">Fang Song</a> Worked on attacks that succeed with 3/4 probability for an XOR variant of the BB84-based quantum money game.
SPRING 2022-23	<b>Research Assistant - Quantum Black-Box Reductions</b> <i>Portland State University</i> Advisor <a href="#">Fang Song</a> Proved that quantum black-box reductions are insufficient to prove the security of statistical non-interactive zero-knowledge arguments (S-NIZKs) based on standard assumptions. Reinterpreted this result by constructing a unified framework for studying reductions in a quantum world.
WINTER 2022	<b>Teaching Assistant - Introduction to Cryptography</b> <i>Portland State University</i> Instructor: <a href="#">Fang Song</a>
SPRING 2021	<b>Master's Thesis - Research on Secure Multi-Party Computation</b> <i>IIIT Bangalore</i> Advisor: <a href="#">Ashish Choudhury</a> Studied information-theoretic secure multi-party computation tolerating a generalized non-threshold adversary in the asynchronous communication model.
SPRING 2021	<b>Teaching Assistant - Foundations of Cryptography</b> <i>IIIT Bangalore</i> Instructors: <a href="#">Ashish Choudhury</a> , <a href="#">Srinivas Vivek</a>
SUMMER 2018	<b>Open Source Developer - Google Summer of Code 2018</b> <i>SymPy: a Python library for symbolic mathematics.</i> Mentors: <a href="#">Jason Moore</a> , <a href="#">Ondřej Čertík</a> Implemented a parser that translates Autolev (a proprietary symbolic dynamics language, now superseded by <a href="#">MotionGenesis</a> ) code to SymPy code using the ANTLR parser generator. More details <a href="#">here</a> , and <a href="#">here</a> .
